

Seed Aide® CoverGrow™ Turns Home Dirt to Home Turf

Homeowners have been realizing the benefits of the newly improved mulching pellet from Profile Products. Applied on top of your seed of choice, Seed Aide CoverGrow will provide ideal conditions for the seed to germinate. This home lawn application was captured on the west coast of the United States where temperatures were hot and put establishment of the grass at a disadvantage. The yard had previously suffered from drought stress. Thanks to the water-holding capacity and coverage of the mulching pellets, the homeowner was able to repair the drought-damaged lawn and have a lush front yard just two weeks after the application!

Challenge

- Clay-based soil
- Arid temperatures that created difficult seed bed conditions

Solution & Application

- Prepared the soil and applied seed with broadcaster spreader
- Seed Aide CoverGrow applied at 50lb/1000 sq. ft.
- Water-holding capacity of mulching pellets allowed seed to access water in order to germinate in hot conditions

Results

- Lush vegetation established just 2 weeks after installation
- Advanced tackifier technology to prevent seed movement during rain and irrigation cycles
