Directions for use:

- The optimum method for applying EXCEED PEAT is by using the slurry method.
- Dampen the seed with non-chlorinated, clean, cool water at a rate of 8.5 oz. of water per 50 pounds of seed.
- Add appropriate amount of inoculant (2.5 oz - 4 oz./50 pounds of seed) and mix water, seed, and inoculant thoroughly until seed is uniformly coated.
- Apply entire contents of bag to the amount of seed treated stated on the package.
- This method should be done in a container outside of the planter box.
- Allow 1-3 minutes for mixture to dry and then plant as soon as possible.
- EXCEED PEAT can also be applied dry directly onto the seed. Mix seed and inoculant thoroughly until seed is uniformly coated. Layering seed and inoculant will aide in this process.
- Applying the inoculant dry is also recommended for seed that is pre-treated with fungicide. However, maximum seed adhesion will not be obtained by applying this product dry.
- **FOR SOILS THAT HAVE NEVER BEEN HOST TO CROWNVETCH, APPLY PRODUCT AT A 1.5-2.0X RATE.**

Storage of Exceed Peat

- AVOID STORAGE IN DIRECT SUNLIGHT AND STORE PRODUCT AT TEMPERATURE UNDER 78° F.
- KEEP PRODUCT COOL AND OUT OF SUNLIGHT AND ONLY OPEN WHEN READY TO USE.
- **EXCEED PEAT CARRIES A ONE-SEASON SHELF LIFE AND SHOULD BE USED BEFORE EXPIRATION.**

EXCEED PEAT IS NOT A PLANT FOOD PRODUCT

EXCEED PEAT IS A NATURALLY OCCURRING BRADYRHIZOBIUM THAT FORMS NODULES ON THE ROOTS OF THE SOYBEAN PLANT AND CONVERTS ATMOSPHERIC NITROGEN TO A FORM THAT THE PLANT CAN USE. THIS IS A NATURALLY OCCURRING SYMBIOTIC RELATIONSHIP BETWEEN THE SOYBEAN PLANT AND BRADYRHIZOBIUM THAT PROVIDES THE SOYBEAN PLANT WITH THE MAJORITY OF THE NITROGEN REQUIRED BY THE PLANT.

Minimum Guarantee:
